Personal Profile

I am a Ph.D. candidate at Kim Jaechul Graduate School of AI, Korea Advanced Institute of Science and Technology (**KAIST AI**), where I am fortunate to be advised by Prof. Chulhee “Charlie” Yun of Optimization & Machine Learning (**OptiML**) Laboratory, KAIST AI. Previously, I worked at **Google** NYC as an intern (Student Researcher), hosted by Srdinadh Bhojanapalli. Also, I completed my M.Sc. (in AI) and B.Sc. (in Math, minor in CS, Summa Cum Laude) at KAIST.[?]

My primary research interests lie in optimization, machine learning (ML), and deep learning (DL). During my journey to a Ph.D., my ultimate research goal is to **rigorously understand and practically overcome** the following **three critical challenges in ML/DL**:

Generalizability

Out-of-distribution generalization of (large) language models.

(e.g., length generalization and compositional generalization of Transformers)

Adaptability

Training adaptable models under an evolving environment.

(e.g., continual learning, maintaining the plasticity of neural networks, sample-efficient reinforcement learning)

Multifacetedness

Learning with multiple (possibly conflicting and/or orthogonal) goals.

(e.g., minimax optimization, bi-level optimization, fairness in ML)
