Personal Profile

I am a Ph.D. candidate at Kim Jaechul Graduate School of AI, Korea Advanced Institute of Science and Technology (KAIST AI), where I am fortunate to be advised by Prof. Chulhee “Charlie” Yun of Optimization & Machine Learning (OptiML) Laboratory, KAIST AI. Previously, I worked at Google NYC as an intern (Student Researcher), hosted by Srdinadh Bhojanapalli. Also, I completed my M.Sc. (in AI) and B.Sc. (in Math, minor in CS, Summa Cum Laude) at KAIST.¹

My primary research interests lie in optimization, machine learning (ML), and deep learning (DL). During my journey to a Ph.D., my ultimate research goal is to **rigorously understand and practically overcome** the following **three critical challenges** in ML/DL:

Generalizability

Out-of-distribution generalization of (large) language models.

(e.g., length generalization and compositional generalization of Transformers)

Adaptability

Training adaptable models under an evolving environment.

(e.g., continual learning, maintaining the plasticity of neural networks, sample-efficient reinforcement learning)

Multifacetedness

Learning with multiple (possibly conflicting and/or orthogonal) goals.

(e.g., minimax optimization, bi-level optimization, fairness in ML)

Publications

Preprints

- Chang, Hoyeon*, Jinho Park*, Hanseul Cho*, Sohee Yang, Miyoung Ko, Hyeonbin Hwang, Seungpil Won, Dohaeng Lee, Youbin Ahn, Minjoon Seo. “Characterizing Pattern Matching and Its Limits on Compositional Task Structures.” *arXiv preprint*. 2025. [\[arXiv\]](#)

Education

Korea Advanced Institute of Science and Technology (KAIST)

Ph.D. in Artificial Intelligence

- Advisor: Prof. Chulhee Yun (Optimization & Machine Learning (**OptiML**) Laboratory, Kim Jaechul Graduate School of AI (GSAI), KAIST)
- Anticipated Graduation Date: Aug. 2027

Seoul, Republic of Korea

Sept. 2023 – Current

KAIST

M.Sc. in Artificial Intelligence

- Advisor: Prof. Chulhee Yun (Optimization & Machine Learning (**OptiML**) Laboratory, Kim Jaechul Graduate School of AI (GSAI), KAIST)
- Thesis: “Improved Convergence Rate of SGDA by Shuffling: Focusing on the Nonconvex-P ℓ Minimax Problems” (Approved by Chulhee Yun, Se-Young Yun, & Donghwan Kim)
- GPA: 4.22/4.3

Seoul, Republic of Korea

Mar. 2022 – Aug. 2023

KAIST

B.Sc. in Mathematical Sciences

- Minor in Computing Sciences
- Summa Cum Laude (GPA: 4.05/4.3)

Daejeon, Republic of Korea

Mar. 2017 – Feb. 2022

University of Twente

Exchange Student Program

- Major in Applied Mathematics

Enschede, Netherlands

Feb. 2020 – Jul. 2020

Incheon Science High School (ISHS)

High School

- Early graduation by one year (i.e., two-year course)

Incheon, Republic of Korea

Mar. 2015 – Feb. 2017

Experiences

Google G

Intern: Student Researcher Program (On-Site), Engineering

New York, United States

May 5th 2025 – Aug. 22nd 2025

- Host: Srinadh Bhojanapalli

- Notable Co-workers: Hravt Harutyunyan, Keivan Mohtashami

- Office: Google NYC 9th Building (111 8th Ave, New York, NY)

- Research Topic: Advanced architectural component in Transformers

SNU-KAIST AI/ML Theory Workshop

Organizer

Gangneung, Republic of Korea

Aug. 12th–14th, 2024

- Homepage: nick-jhlee.github.io/snu-kaist-workshop

- Jointly organized by three research groups of Prof. Ernest K. Ryu, Prof. Min-hwan Oh, and Prof. Chulhee Yun.

Machine/Deep Learning Theory + Physics (MDLTP) Seminar

Organizer

Seoul, Republic of Korea

Jul. 2022 – Feb. 2023

- Homepage: sites.google.com/view/mdltp-p

- Jointly organized by OSI Lab, OptiML, and CSSPL

- Topics: Learning theory, loss landscape, trajectory analysis, (stochastic) optimization, high-dimensional statistics, statistical/mathematical physics, scientific machine learning, and more.

Geometric Deep Learning Seminar

Seminar Participant

Seoul, Republic of Korea

2022

- A seminar organized by OptiML and OSI Lab

- Resources: [\[Homepage\]](#) [\[Lecture Videos\]](#) [\[Book\]](#)

KAIST 2021 Post-AI Research Project

Undergraduate Researcher

Daejeon, Republic of Korea

May 2021 – Dec. 2021

- Jointly advised by Prof. Sangyoong Yi (DS Lab, GSFS, KAIST) & Prof. Jinkyoo Park (Sys. Int. Lab, ISyE, KAIST)

- Project: Research on ‘AI-augmented Organizations’ of Collaborative Decision Making and Learning. Below, I list my contribution:

1. *Algorithm Design*: Devised a model-based randomized algorithm for a single-player finite-horizon NK landscape optimization game
2. *Experiment Assistance*: Conducted experiments on human-AI cooperation based on the algorithm that I devised

Individual Study: Optimization for Deep Learning

Undergraduate Student @ KAIST

Daejeon, Republic of Korea

Mar. 2021 – Jun. 2021

- Advised by Prof. Jinwoo Shin (ALIN Lab, GSAI, KAIST)

- (1) gradient-based optimizers for large-batch setting (e.g., LARS & LAMB); (2) theoretical analysis on gradient clipping (paper reading)

Individual Study: Deep Learning in Computer Vision

Undergraduate Student @ KAIST

Daejeon, Republic of Korea

Sep. 2020 – Feb. 2021

- Advised by Prof. Jong-chul Ye (BISPL, BBE, KAIST)

- Assignment: Semantic segmentation of kidney tumor with U-Net (with KiTS19 challenge dataset)

- Self-taught PyTorch coding on Linux Ubuntu

Individual Study: Statistical Learning Theory

Undergraduate Student @ KAIST

Daejeon, Republic of Korea

Jun. 2020 – Aug. 2021

- Advised by Prof. Yeonseung Chung (MAS, KAIST)

- Resource: Gareth James, Daniela Witten, Trevor Hastie, and Robert Tibshirani. "An Introduction to Statistical Learning: with Applications in R." Springer, 2013. [\[link\]](#)

Awards

2025 **Top Reviewer (Top 1.88%: 206 of 10,943 reviewers)**, ICML 2025

Vancouver, Canada

2024 **Best Paper Award (Top 3)**, JKAIA 2024

Republic of Korea

2024 **Top Reviewer (Top 8.60%: 1,304 of 15,160 reviewers)**, NeurIPS 2024

Vancouver, Canada

2022 **NAVER Outstanding Theory Paper Award (Top 3)**, JKAIA 2022

Republic of Korea

2022 **Summa Cum Laude**, Bachelor's, KAIST

Republic of Korea

2017 – 2020 **The National Scholarship for Science and Engineering**, Korea Student Aid Foundation

Republic of Korea

2017 Fall **Dean's List**, The School of Freshman, KAIST

Republic of Korea

Ongoing Projects

Length Generalization in Language Models (e.g., Transformers)

Seoul, Republic of Korea

Nov. 2023 – Current

KAIST AI + Google Research

- See: [C6], [C8].

- Transformer (Vaswani et al., 2017) models have exhibited tremendous success in various areas of artificial intelligence such as natural language processing (NLP), computer vision, and reinforcement learning.

- However, Transformers often struggle to achieve *length generalization*: they usually fail to extrapolate their performance onto longer sequences than those at the training time.

- We aim to come up with a unifying framework to solve the length generalization problem on several synthetic tasks and arithmetic tasks, such as addition, multiplication, copying/reversing under the presence of duplicate tokens, and the parity task. The exact structures for those tasks are known, so we might be able to inject the structure into our Transformer model directly.

- Furthermore, we would like to find a method that automatically discovers the hidden structure of the tasks to apply our methodology for length generalization to general NLP tasks.

Fair (Streaming) Principal Component Analysis - Complexity Lower Bound

Seoul, Republic of Korea

Mar. 2023 – Current

KAIST AI

- In Lee et al. (2023) [C3], we have studied the memory-efficient & group-wise fair principal component analysis (PCA) methodology called 'Fair Streaming PCA'.

- We proved the upper bound of sample complexity of our main algorithm 'Fair Noisy Power Method (FNPM)' mainly exploiting matrix Bernstein inequality. However, the tightness of the bound has not been checked yet.

Overcoming Loss of Plasticity of Neural Network

Seoul, Republic of Korea

Nov. 2023 – Current

KAIST AI

- See: [C2], [C5].

- Neural networks often struggle with the problem called 'loss of plasticity,' which refers to the phenomenon that a model loses the ability to adapt to the shifts in data distribution, especially when new data points appear.

- Interestingly, re-initializing the model partially or entirely, so-called "re-learning," greatly helps the model to recover its adaptability in practice.

- Why is it beneficial? Furthermore, can we develop a "smart" way of re-learning instead of re-initializing the whole model?

Services

Top-tier ML Conference/Journal Reviewer (24 papers)

From time to time

- TMLR (TMLR).
• NeurIPS: 2023 (NeurIPS), 2024* (NeurIPS), 2025 (NeurIPS)
– NeurIPS 2024: awarded Top Reviewer (Top 8.60%: 1,304 of 15,160 reviewers).
- ICML: 2025* (ICML)
– ICLR 2025: awarded Top Reviewer (Top 1.88%: 206 of 10,943 reviewers).
- ICLR: 2024 (ICLR), 2025 (ICLR), 2026 (ICLR).

1st GPU server manager of OptiML lab

June 2022 – Feb 2024

- Being involved in installing OptiML lab's very first 5 GPU servers and a storage server
- Allocating GPU nodes to lab members
- Managing errors occurred in the servers

Tutoring Basic Courses for Freshmen at KAIST

Mar 2018 – Dec 2021

- Calculus II (2018–2019; 3 times), Introduction to Programming (Fall 2021)
- Allocating GPU nodes to lab members
- Managing errors occurred in the servers

Languages

English Professional Proficiency (i.e., sufficient for academic activities)

Korean Native proficiency

Others Had some introductory courses on French, German, Classical Latin, & Chinese.

Skills

Programming Familiar: Python (PyTorch, NumPy, Scikit-learn, Jupyter, Pandas, JAX, etc.), MATLAB.

Novice: C, C++, R, HTML/CSS, Scala

Computer Misc. Familiar: LaTeX (Overleaf/VSCode/MacTex), Git, Microsoft Office, Keynote

Novice: Adobe (Lightroom, Premiere Pro, After Effects, Photoshop)

Music & Hobby Playing the drums and percussions. Begun to learn in 2009. Joined music bands listed below:

- ISHS: *Cha-rang* (2015–2016)
- KAIST: *Muse KAIST* (2017–2019), *Carpe Diem* (2019)
- Club “Music Space”: Team *Woodstone* (2024–2025)
-

I'm a huge music fan; mostly, jazz (fusion, acid, hard bop, cool, bossa nova, etc.), funk, K-indie, Rock, Latin, and many more.
